

Datasheet - Microperforated

Front projection - Acoustically transparent - gain 1.05 - 410 micron - H roll 2400 mm

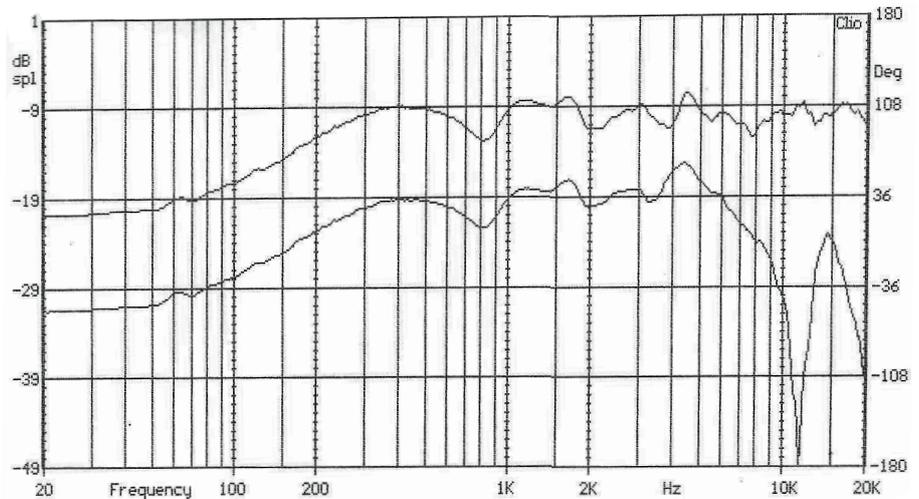

Acoustically transparent, it is ideal for applications where loudspeakers are positioned behind the screen. It is made of a PVC sheet, with edges welded around the viewing area.

The micro-perforation, completely invisible during projection, allows its use even on small-format screens.

Open area: 5.77 %
Max. perforating width: 2570 mm

Screen in direct contact with the loudspeaker

Screen positioned 10-20-40 cm from the loudspeaker
