

Datasheet - Perforated

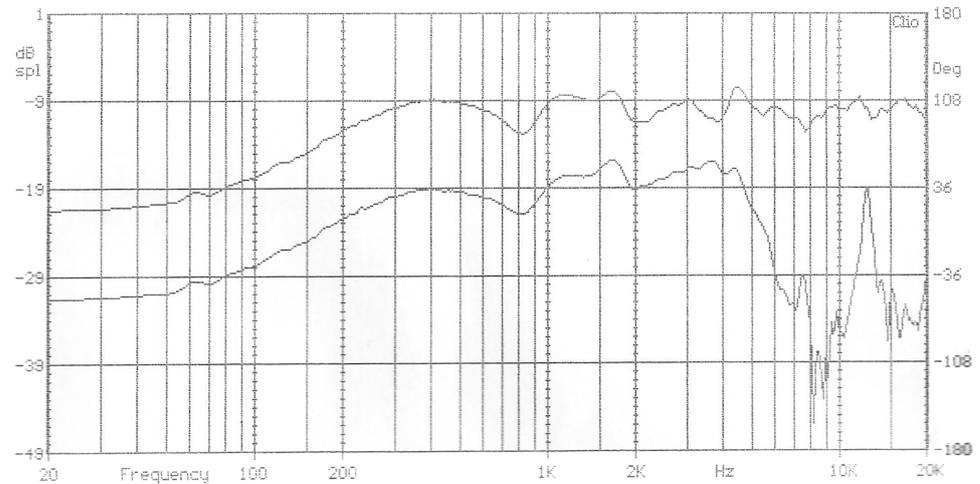

Front projection - Acoustically transparent - Gain 1.0 - 410 microns - Roll width 2400 mm.

Sound-transparent front projection surface, ideal for use on large-size screens and in any case with a base wider than 300 cm. Made of PVC, it is weldable and can be used on both motorized and fixed frame screens, in situations where the loudspeakers are positioned behind the screen. The perforation is perfectly invisible during projection.

Open area: 4.70%
Max. perforating width: 2605 mm

Screen in contact with the loudspeaker.

Screen positioned 10-20-40 cm from the loudspeaker.
